# MANUAL

EuroPanels

## Removing PU foam from overlapping of roof panels

1   Cut the PU with a hand saw through the total thickness of core alongside the precut of internal facing of panel

2   Using the cutting set with wire, cut the PU in the horizontal way to the edge of the panel and remove the insulation including the internal facing.

3   Remove the PU from the ribs with help of spatulas.

4   Using a polishing cloth for metal surfaces, remove remaining of foam from the facing.
